

ESG Disclosure Analysis

NLP-Driven Keyword, Sentiment & Greenwashing Risk Assessment — Ahold Delhaize, JDE Peet's, Royal FrieslandCampina (2024–2025)

Key Findings

Scope 3 dominates Ahold Delhaize's disclosure (115 mentions), suggesting strong regulatory or investor pressure to address supply-chain emissions. Yet 37.7% of those mentions carry high greenwashing risk, indicating forward-looking claims that lack verification.

Royal FrieslandCampina shows the lowest greenwashing risk (29.6% high) and the fewest total mentions (27 instances), which may reflect either more conservative disclosure norms or narrower sustainability coverage in the 2025 annual report.

JDE Peet's leads on deforestation volume (109 mentions) — consistent with its coffee and tea supply chain exposure — but achieves the highest high-risk share (38.6%), concentrated in regenerative agriculture claims. The balanced 50/50 sentiment split points to a company still navigating credibility.

Regenerative agriculture carries the highest per-instance greenwashing risk across all three companies — the term appears frequently in aspirational contexts with limited performance data attached, flagging it as the most scrutinised claim category for investors and NGOs.
